

Construction traffic management

A Construction Traffic Management Plan (CTMP) will be produced in consultation with the Local Highways Authority. This plan will detail the approved route for material deliveries, times (to avoid peak traffic hours), and any other management measures required. It is anticipated the construction period will be approximately five months.

It is envisaged that the construction traffic route will follow the Strategic Road Network (A19) leaving at the junction with the A182 and onto the B1283 (Durham Lane), where the Westmoor site is located.

The majority of deliveries would be by HGVs, bringing in the panels and their supporting framework, as well as the BESS. There would also be light vehicle deliveries for other smaller electrical equipment, ancillary infrastructure, temporary welfare cabins etc.

It is anticipated that construction workers would be taken to the site via minibuses to minimise the number of light vehicles travelling to the site.
